PEER EVALUATION

We all bought the material to build this object and did our own research on sensors. To start off, Cayla and I built the general shape of the cloud while Ana began the code. Then I started the circuit with Ana (with the help of Elio) while Cayla finished the body of the object. Cayla finalized the entire shape of the cloud by including a pouch for the LED strip, a pouch for the pressure sensor and velcro attachments. On Tuesday Ana and I began the code which controlled the LED strip with the help of Sabine. On Wednesday, Ana and Cayla finalized the code while I began to piece together the cloud and researched on autism. Finally, together we added any finishing touches.

I was more comfortable building circuits, therefore, I took control of that. Cayla was much more qualified with the construction of the pillow which is why she took on that role. Ana was stronger in coding, therefore, she focused on that while Cayla and I examined and contributing what we could.
